AIMCR FORENSIC REPORT

AI-Powered Mobile Forensic Intelligence Platform for Autonomous Crime Reconstruction

Case Reference:	Operation phoenix
Case Status:	Active
Date Generated:	2026-07-21 20:09:35
Assigned Investigator:	Lead Investigator John
Evidence Count:	500 artifacts ingested
Forensic Complexity Index:	30/100 (Medium)

Executive Summary

This document compiles explainable investigative findings extracted from mobile device artifacts using the Autonomous Crime Reconstruction and Behavioral Profiling engines. Every finding detailed within this report is traceably backed by a corresponding SHA-256 hashed forensic artifact, maintaining full chain of custody. The contents represent investigative directions and indicators of probability rather than definitive judicial outcomes.

1. Incident Reconstruction

No structured cybercrime sequences were reconstructed by the engine.

2. Behavioral Anomaly Log

The Isolation Forest engine analyzed the user's historical feature vectors (active hours, GPS coordinates, application categories, file extensions) and highlighted the following deviations from baseline behavior:

Timestamp	Type	Score	Anomaly Explanation / Context	Ref
2026-01-30 00:11:00	SMS	1.00	SMS text containing potentially malicious URLs or suspicious transaction codes was received.	0db355ed

2a. Anti-Forensics & Tampering Log

Heuristic scanners inspected the integrity of the device artifacts to find evidence of active concealment, extension spoofing, file system timestamp manipulation, or database tampering:

No active anti-forensics attempts or database anomalies were flagged.

3. Relationship Network & Priority Entities

The communication graph maps contacts, browser domains, and apps into connected modular communities. Nodes are assigned an Investigative Priority score using degree and betweenness centralities.

Insufficient relationship data to generate communication graph metrics.

3a. Forensic Investigation Recommendations

AI/Deterministic Recommendations Summary: Based on the analysis of active threat intelligence matches and anti-forensics indicators, the investigator should prioritize disassembling the spoofed APK binary (disguised as a PNG) and carving the tampered SQLite database. Reconstructing network infrastructure and verifying modification timestamps via system logs is critical to confirm the attack vector and trace perpetrator activity.

Recommended Actions	Priority	Forensic Rationale / Next Steps
Establish forensic write-block and compute device image hash	Medium	Ensures all evidence remains statically secure and complies with chain of custody regulations.
Verify device acquisition logs for cryptographic integrity matches	Medium	Verifies that no bit-level changes occurred during evidence ingestion.

4. Evidence Integrity Index (Chain of Custody)

Every artifact imported into the platform is indexed below with its original acquisition timestamp and a SHA-256 integrity hash to ensure transparency and auditability.

Evidence ID	Timestamp	Type	Source File	SHA-256 Hash Signature
